

1100L AQUAPure Water for Injection

A Smarter, Greener Solution for High Volume Compendial Water Users

Organizations that rely on large volumes of Sterile Water for Injection (WFI) now have a cost-effective and environmentally sustainable alternative to traditional plastic drums. Aquability's **1100L Collapsible Tote** system maximizes each shipment by delivering greater product volume in fewer containers, significantly reducing the need for frequent changeovers. These 1100L totes are easy to collapse, stack, and return to Aquability for reuse, dramatically lowering environmental impact and minimizing warehouse storage requirements.

Why Choose 1100L Collapsible Totes Over Traditional Plastic Drums

Perfect for High Volume Efficiency

- 💧 **1100L per pallet** maximizes fluid volume per shipment versus four 200L drums, reducing shipment frequency and freeing up warehouse space
- 💧 **Reduces Time and Labor** spent handling, storing, and disposing of drums
- 💧 **Decreases Frequent Changeovers** since each tote holds over five times more than a 200L drum
- 💧 **Protective Poly Bag** guarantees the integrity and sterility of your product stays intact during transit

Practical Design Saves Space & Cuts Down on Waste

- 💧 **Reusable Tote Design** can be collapsed and stacked up to five high, with easy return to Aquabilti for reuse
- 💧 **Dramatically Cuts Down on Waste** by removing plastic drum disposal from your process
- 💧 **Frees Up Storage Space** by eliminating the build up of used plastic drums at your facility

Together, these Benefits Create a Greener, More Sustainable Workflow

- 💧 **Fewer Shipments** reduce transport emissions and lower your business's carbon footprint
- 💧 **Easy Return and Reuse System** simplifies sustainable practices for your operation
- 💧 **Produce Significantly Less Plastic Waste** by replacing traditional plastic drums with a compact, reusable alternative
- 💧 **Strategically Located** to minimize freight cost, reduce transit time, and decrease carbon emissions to an expansive customer base
